

## **Day 1**

### **GitHub**

is a United States-based global company that provides hosting for software development version control using Git. In 2018, it became a subsidiary of Microsoft for US\$7.5 billion.

It offers the distributed version control and source code management functionality of Git, plus its own features.

### **What is git**

<https://www.atlassian.com/git/tutorials/what-is-git>

### **live practice**

**how to config gitbash**

**first add user name from gitbhub**

`git config --global user.name "yourgithubname"`

**Second add user Email from gitbhub**

`git config --global user.email "youreemail"`

**Check if configuration has been set.**

`git config --list`

## **Four process to push data**

First you have to copy http link from github

<https://github.com/Eckysaroydnyato/webDevelopment.git>

second you have to clone

**git clone** <https://github.com/Eckysaroydnyato/webDevelopment.git>

**webDevelopment.**

**How to push after doing modification**

### **Step 1**

**git add .**

### **Step 2**

**Git status**

### **Step 3**

**git commit -m "your message"**

### **step 4**

**git push -u origin main/master**

## **How to check pull data if changes made from github**

git pull

<https://github.com/jonb24/web-Development.git>

<https://github.com/Cyrussunny/Web-Development.git>

<https://github.com/Eckysaroydnyato/webDevelopment.git>
